

EasySave v1.1

Release Note

ProSoft — v1.1 — 2026

1. Overview

EasySave v1.1 is a minor update to v1.0, released to meet a specific client request. This version adds the ability to choose the log file format between JSON and XML.

2. What's New

Log Format Selection

Users can now choose the log file format at startup:

- JSON format (default — compatible with v1.0)
- XML format (new — required by a major client)

The format is selected at startup in the user's chosen language.

New Files in EasyLog.dll

File	Description
ILogFormatter.cs	Strategy interface — Format() and GetExtension()
JsonFormatter.cs	Implements JSON formatting (v1.0 behavior)
XmlFormatter.cs	Implements XML formatting (new)

Modified Files

File	Change
Logger.cs	Added SetFormatter() method and _formatter attribute
BackupManager.cs	Loads log format from Settings at startup
LanguageManager.cs	Added translation keys for log format selection
Program.cs	Log format selection shown after language selection
Settings.cs	New class — stores user preferences (LogFormat)

3. Compatibility

- Fully compatible with v1.0 — all existing features preserved
- JSON is the default format — no breaking change for existing clients
- EasyLog.dll updated — backward compatible

4. Known Limitations

- Log format is selected at startup only — cannot be changed mid-session
- No graphical interface — console only
- Maximum of 5 backup jobs
