

EasySave v1.1

Technical Specifications

ProSoft — v1.1 — 2026

1. Context

EasySave v1.0 has been deployed at multiple client sites. A major client requires log files in XML format rather than JSON, but does not wish to upgrade to v2.0. This document defines the specifications for v1.1, a minor update addressing this requirement.

2. Objectives

- Allow the user to choose the log file format: JSON or XML
- Maintain full compatibility with v1.0
- Update EasyLog.dll while preserving backward compatibility

3. Functional Requirements

3.1 Log Format Selection

- The application must ask the user to choose the log format at startup
- Available formats: JSON (default) and XML
- The selection must be displayed in the user's chosen language (FR/EN)
- The selected format must be applied to all subsequent log writes

3.2 EasyLog.dll Evolution

- The DLL must implement a Strategy pattern for log formatting
- ILogFormatter interface with Format(LogEntry) and GetExtension() methods
- JsonFormatter class implementing ILogFormatter
- XmlFormatter class implementing ILogFormatter
- Logger must expose a SetFormatter(ILogFormatter) method

3.3 Settings Persistence

- Log format preference must be saved in a settings.json file
- Settings file location: %AppData%\EasySave\settings.json

4. Non-Functional Requirements

- No breaking changes — v1.0 clients using JSON must not be affected
- Code and comments in English
- No code duplication
- All existing v1.0 features must remain functional

5. Deliverables

Deliverable	Description
EasySave.exe v1.1	Updated console application
EasyLog.dll v1.1	Updated library with XML support

User Manual v1.1	Updated bilingual documentation (1 page)
Release Note v1.1	Description of changes
UML Diagrams	Updated class and sequence diagrams
GitHub repository	Tagged v1.1 release

6. Version Comparison

Feature	v1.0 / v1.1
Interface	Console (unchanged)
Log format	v1.0: JSON only / v1.1: JSON or XML
Max jobs	5 (unchanged)
Encryption	No (unchanged)
Business software	No (unchanged)
